<b>Title:</b>	Towards a Parallel Inference Machine: the APIH project
<b>Year:</b>	1990
<b>Author:</b>	<a href="#">J Vlahavas</a> , <a href="#">C Halatsis</a> , <a href="#">A. Pombortsis</a> ,
<b>Abstract:</b>	This paper gives an overview of the APIM (Aristotle Parallel Inference Machine) research project, which aims to the design of a new multiprocessor architecture for the parallel execution of logic programs. The APIM system is designed to support both OR-parallelism and independent AND-parallelism in an all solutions approach. It has been developed by adapting the RPM, a sequential high performance inference machine, developed in our Lab.
