Title:	**Towards Privacy in Personal Data Management**
Year:	2008
Author:	P.S. Efraimidis G. Drosatos F. Nalbadis A. Tasidou
Abstract:	We present a personal data management framework called Polis, which abides by the following principle: Every individual has absolute control over her personal data, which reside only at her own side. Preliminary results indicate that beyond the apparent advantages of such an environment for users' privacy, everyday transactions remain both feasible and straightforward.
