Title:	SEMANTIC CONCEPTUAL MODEL FOR MANAGING CLINICAL PROTOCOLS
Year:	2015
Author:	Nick Portokallidis, George Drosatos and Eleni Kaldoudi
Abstract:	Clinical protocols play an important role in today's evidence based medicine for developing clinical reasoning skills [1] and they are extensively used both in teaching and practicing medicine. In this research, we will try to organize and propose an ontology for managing (as metadata) clinical protocols in a much more beneficial way than they are currently used.
