

Title:	The use of trees at Nightscape Urban Environment
Year:	2006
Author:	Georgi, Neratzia Julia, Sarikou, Sophia
Abstract:	The last few years have been a huge increase in the transfer of coloured architectural lighting, derived from entertainment and theatre, into the urban and exterior environment. The trees in to the landscape seem to be unique forms and sometime with appropriate uses can enhance the aesthetical appearance of the surrounding landscape. Lighting can be used to highlight key landscape features such as specimen trees or shrubs, rows of trees, or plant synthesis.
