Vital statistics rates are based on a mean population instead of the population on the 30th June, which is no longer used. The mean population is a weighted average of the five "end-of-the-quarter" estimates which are centred upon June 30, the weights being 1, 4, 2, 4, 1, respectively. Undue weight which might otherwise attach to the temporary influx of visitors is thus avoided. Births and deaths registered in the District Towns include births and deaths in hospitals.

RETURN of PAUPERS, IMMIGRANTS, and EMIGRANTS during the year.

Paupers	Number of Immigrants	Number of Emigrants
There is no Poor Law or system of relief of paupers in Cyprus, but Poor Houses have been established by certain Municipalities (*see* Section 28).	13,844 persons entered Cyprus during the year, but it is not possible to give the number of immigrants separately. [Excluding Military	14,694 persons left Cyprus during the year, but it is not possible to classify them as emigrants or non-emigrants. Refugees and Personnel.]

Concessions and Permits			General information regarding the industry and the possibilities of development
Concessions, cutting permits, etc.	No.	Area covered.	The present area of State forests is 622 sq. miles representing 17% of the total area of the Island. Forest land other than the State forests is of negligible proportions. Approximately 73% of the State forests are situated in the mountain catchment areas. The remainder consist of lowland scrub areas or plantations. The main forests are managed by the Forest Department, primarily for water conservancy, while the lowland scrub forests and many small village plantations are administered through the District Commissioners as village fuel or grazing grounds. Large scale afforestation works are being carried out both in the main forests and in village forest areas. The forests contribute about 30%–50% of the Island's normal timber requirements (mainly in pine timber) and the whole of the internal requirements of fuel wood and charcoal. The principal forest species are :— *Pinus Brutia*, *Pinus caramanica*, *Cupressus sempervirens*, etc., etc. Species most commonly found in plantations are :— *Eucalyptus rostrata*, *Eucalyptus tereticornis* and *Eucalyptus gomphocephalos* and *Acacia cyanophylla*.

11. Seasons of fisheries and description of area fished.

All the year round. In Cyprus waters within a mile or two of the shore.

12. General information regarding the industry and the possibilities of its development.

In the sea round Cyprus there is a fair amount of fish; unfortunately however the Cypriot is not a fisherman. Few local fishermen will go out except in good weather, and in consequence the supply of fish is not equal to the demand. Five Cypriot and four foreign auxiliary sailing trawlers did good work during the year 1946.

The sponge fishing has since the year 1903 been entirely under the control of the Government.

The sponges obtained from the coasts of the Island are of good quality and the fishing is mostly done by fishers from the Dodecanese Islands.

Each boat must be provided with a licence according to capacity, the fees being charged:—

	£	s.
(*a*) For each boat with diving apparatus	1	0
(*b*) For each boat with harpoon (kamaki) naked diving	–	10

In addition to the licence fee boats with diving apparatus pay 25% of their catch to Government and harpoon boats 20%.

In 1946 1 harpoon boat and 3 machine-diving boats worked from June to October.

The total catch was 1,690 okes.

(*a*) There are no inland-water fisheries in Cyprus.

(*a*) Details regarding these mills cannot be obtained as many of them are owned by illiterate persons who keep no books. The grower usually takes his grain to the mill and removes it after grinding. Mills do not generally purchase grain.

(*b*) Primitive kilns, of which no details are available, are also found in certain localities.

7.—SUMMARY OF INDUSTRIAL DEVELOPMENT.

7.—A summarized statement of any developments in the agricultural, forestal, fishing, mining, and other industries of the Colony during the year under review, with a statement as to progress up to date. A special account should be given of Government grants or other action for the development of the natural resources and industries of the Colony.

Cyprus is essentially an agricultural country and its Agricultural population is extremely conservative. Under war conditions, however, the farmer has had to face scarcity of agricultural labour, shortened working hours and increased wages, factors which have encouraged many to consider the adoption of mechanized farming where land conditions permit. Unfortunately, farm machinery is still difficult to obtain. Harvesting operations, however, have been made easier by the arrival during the year of considerable numbers of reaping machines and a consignment of combine harvesters. The importation of considerable numbers of internal combustion engines has encouraged the manufacture of local thrashing machines which thrash but do not winnow the grain.

2. The control over agricultural produce, imposed as a result of war conditions, was somewhat relaxed during the year and private enterprise was enabled to take a more active part in the export trade. The export of citrus to the United Kingdom, however, was carried out on behalf of the Ministry of Food under the control of the Marketing Department. Most farmers now appreciate the benefits of collective marketing. The high prices realized for agricultural produce during and immediately after the war were, on the whole, maintained in 1946.

3. The export of wines to the United Kingdom has increased and Malta and other Middle East countries have provided good markets. The quality of wines and spirits has shown some improvement over that of recent years. At the end of the year the demand for raisins was very poor and the prices of other vine products showed a downward tendency.

4. The demand for Cyprus cattle, pigs and equines from Middle East countries has been such that a strict control has had to be exercised over exports. Large numbers of donkeys and mules were exported to Greece by U.N.R.R.A.

5. Owing to the existing local prosperity, the demand for beef was on a larger scale than the number of cattle could sustain. Increasing interest is being shown in the keeping of good quality stall-fed or tethered goats, especially in those villages which have balloted against free range goats. Stud animals provided by the Livestock Division of the Department of Agriculture are being increasingly used. There is a good demand for eggs of pure breeds of poultry from the Government Stock Farm. Steps are being taken, with the aid of a Colonial Development grant, to provide instruction to the public (and to the women in particular) in the better methods of poultry management.

6. As a result of the existence of a ready market for all grades of tobacco at remunerative prices in recent years, the cultivation of tobacco reached a record level in 1946. The market for the new crop, however, was disappointing to growers. Imported cigarettes and manufacturing tobacco competed with local produce and the demand for Cyprus tobacco from local manufacturers and from overseas has been on a reduced scale.

7. The newly-established vegetable seed export industry made good progress during the year. Production totalled 7,905 lbs. of seed, of a total value of £6,308, compared with an export in 1945 of 911 lbs., valued at £299. The principal crops grown were cauliflowers and lettuce, as well as minor quantities of tomato, onion, leek, carrot, cucumber and runner beans. The packing, appearance and condition of the seed gave general satisfaction to the U.K. firms concerned. The acreages contracted for for the 1947 harvest (mainly of cauliflower and broccoli) have been more than doubled with a comparable increase in the number of farmers engaged. Although the quality of the seed grown has yet to be tested in the United Kingdom, the initial obstacles to the venture are being gradually overcome and there is a fair prospect that the industry will hold its own even when the abnormal conditions which favoured its inception have passed away.

8. The sale and reeling of silkworm cocoons was uncontrolled in 1946 and the purchase of cocoons for the Ministry of Supply was discontinued. The general shortage of textiles in Cyprus led to great interest in silkworm rearing and it is considered that about as large a quantity of cocoons was produced as the number of mulberry trees permitted. It was hoped that the overseas market of silkworm eggs that had developed during the war would prove to have become permanently established. With the end of hostilities, however, the demand seems largely to have disappeared and only one small consignment was exported in 1946.

9. Apart from these special forms of assistance to particular industries, the Department of Agriculture continues to give advice, to encourage the cultivation of all suitable crops, to assist agriculturists to control animal and plant diseases and pests and, generally, to foster agriculture in all its branches by means of its various technical services and by instruction given by itinerant field staff.

10. Location and development of subsurface water by drilling were continued during the year. Eighty-three wells were drilled, aggregating 11,700 feet: of these forty-three were successful producing a volume of 4,340,000 gallons per day. Domestic water supply works were completed in 36 villages and at the end of the year were still in hand in 13 more. Thirty-eight gravity irrigation works were completed during the year to command 20,000 donums. At the end of the year twenty-seven additional works were still uncompleted.

11. Reafforestation works to the value of £46,998 were undertaken in 1946 out of the Colonial Development and Welfare Act. Some 7,514 donums were reclaimed. 141,000 seedlings of various species were sold to private individuals and 229,300 were issued to private individuals.

12. The year 1946 saw a gradual but steady revival of the mining industry which had suffered a severe curtailment of its activities during the war.

The total value of minerals exported amounted to £712,527 compared with £337,095 in 1945. Cupreous pyrites is the most important mineral produced in Cyprus, and during the year under review 256,202 tons of pyrites and 400 tons of cupreous concentrates were exported.

The production and exportation of asbestos increased, and 6,605 short tons of fibre were exported as compared with 3,445 tons during the previous year.

7,352 tons of terra umbra were exported (1945: 3,436 tons) while 5,596 tons of chrome ore were mined of which 1,140 tons were exported. There was a considerable demand for gypsum and the exportation of 14,492 tons showed an appreciable increase over the previous year.

There was increased prospecting activity including a geophysical survey by Petroleum Development (Cyprus) Limited.

Considerable progress has been made in recent years in a number of industries the most important of which are the button, the artificial teeth, and the cigarette manufacturing industries. Soap-making is another promising industry while the manufacture of cotton yarn which was fostered during the war bids fair to develop to a flourishing industry. Shoe-making and furniture-making are progressing, as is also the manufacture of roofing tiles, bricks and cement tiles, etc. The making of embroideries and lace of a local design is steadily recovering from its wartime setback.

Parcels on arrival in Cyprus will be liable to examination by an Officer of Customs, who will assess the amount of Customs dues to be charged thereon. The Customs dues will be collected at the time of delivery, and no parcel can be delivered until the Customs and all other charges are paid.
