Concessions and Permits			General information regarding the industry and the possibilities of development								
Concessions, cutting permits, etc.	No.	Area covered.	The present area of State forests is 627 sq. miles representing 18% of the total area of the island. Approximately 14% of these forests are situated in the hill catchment areas. The remainder consist of scrub forests or plantations in the plains. The principal forest species are :— <i>Pinus halepensis</i> ; <i>Pinus nigra</i>, var. <i>caramanica</i> ; <i>Cupressus sempervirens</i> ; <i>Cedrus brevifolia</i> ; <i>Platanus orientalis</i> ; <i>Alnus orientalis</i> ; <i>Quercus alnifolia</i> ; <i>Arbutus andrachne</i> <i>Juniperus</i> species. The main hill forests are managed primarily for water conservancy. They are also the principal sources of timber. The lowland forests and plantations yield a large part of the island's fuel and charcoal supply. Local timber and forest industries have been entrusted to private enterprise, which has developed rapidly in recent years. The Forest Department's sawmills, of which there are five in operation, are leased to private timber companies. Approximately 25.5% of the island's timber consumption is supplied from the State forests. It is expected that the outturn of local timber will be increased as more of the main forests come under working plan organization.

12. General information regarding the industry and the possibilities of its development.	In the sea round Cyprus there are plenty of fish but unfortunately the Cypriot is not a fisherman. Few of them will go out except in the very best weather and in consequence the supply of fish is not equal to the demand. The number of boats has certainly increased of late years but there is still plenty of room for improvement. Three Greek and Italian and one Cypriot sailing trawlers did good work during the year and demonstrated the practicability of increasing the production of this very valuable article of diet by more up-to-date methods than those practised by Cypriots. The sponge fishing has since the year 1903 been entirely under the control of the Government. The fishing is principally carried on by fishermen from the Greek and Italian Islands who arrive in the Island in the spring and fish through the summer. Each boat must be provided with a licence according to capacity, the fees being charged:— <table><tr><td>(a) For each boat with machine diving apparatus, crew not exceeding 30 persons</td><td>£</td><td>s.</td></tr><tr><td>(b) For each boat with the "Fernex" apparatus only, crew not exceeding 15 persons</td><td>1</td><td>0</td></tr><tr><td>(c) For each boat with naked divers, crew not exceeding 8 persons</td><td>1</td><td>0</td></tr><tr><td>(d) For each boat with harpoon (kamaki), crew not exceeding 6 persons</td><td>—</td><td>10</td></tr></table> In addition to the licence fee machine boats and boats with divers pay 25% of their catch to Government and harpoon boats 20%. In 1938 15, harpoon boats from the Italian and Greek Islands worked from May to September. The total catch was 1,313 okes. (e) There is also a large number of primitive oil mills with an output of over one million okes.

Several primitive rope making establishments, of which particulars are unobtainable, also exist in the Island.

7.—SUMMARY OF INDUSTRIAL DEVELOPMENT.

7.—A summarized statement of any developments in the agricultural, forestal, fishing, mining, and other industries of the Colony during the year under review, with a statement as to progress up to date. A special account should be given of Government grants or other action for the development of the natural resources and industries of the Colony.

Cyprus is essentially an agricultural country, and the agricultural population is extremely conservative. Nevertheless owing to the lower prices offered for exportable produce and the loss or partial loss of some nearby markets for certain products on account of tariff or other restrictive measures, the necessity of searching for alternative crops and markets has been brought home to producers and exporters. Furthermore farmers have shown an increased desire to improve their methods.

In recent years the main agricultural developments were connected rather with marketing than production and to a great extent these conditions applied during 1936. Better marketing and increased production were rendered possible only by an improvement in the quality of produce offered. Local wheat production was protected by a continuation of protective duties on imported flour.

The grading and packing of citrus fruit for export is now on a better basis and although the whole work is done by hand, the standards of various grades of fruits are much improved. The principal consuming markets again were the United Kingdom and Northern Europe, and owing to increased production and better direct shipping facilities some record direct shipments to those countries were made. The fruit inspection service is working satisfactorily and by regulations governing the exportation of citrus fruit and other scheduled products, by intensive propaganda, advice and instructions and by rigid inspections carried out at the ports of exportation, the standard of agricultural produce for export has definitely been raised.

The export of wines to the United Kingdom continued on the same scale as in previous years. The quality of wine exported is steadily improving, but the bulk of village made wines are still of poor quality and quite unfit for the better class markets. Co-operative wine-making Societies are, however, increasing in number and output, and the quality of their produce, the making of which is supervised by officers of the Agricultural Department, is much in advance of that of other village wines.

A steady demand exists in neighbouring countries for cattle, mules and donkeys from Cyprus. Owing to adverse conditions during the previous years of drought the supplies of animals are insufficient to meet the demand, but the services maintained by Government at Stud Stables throughout the Island and the provision of premium donkeys and other stud animals on loan have maintained and improved the quality of the stock and the numbers of animals available for export are now on the increase.

The flax spinning and weaving establishment formerly at Zodia has been transferred to Nicosia and the flax scutching mill at Yeroskipos was conducted during the year by private enterprise with the advice and assistance of flax officers of the Agricultural Department.

The provision of Tobacco Instructors by Government to assist the growers and instruct them in the proper methods of growing and preparing tobacco was continued. The export of yellow leaf tobacco is now allowed only under a licence to export held by the Cyprus Cigarette Company. There was little demand for fumigated tobacco.

The silk industry was carried on under the close supervision of Inspectors, who are responsible by law for encouraging and assisting production and giving advice. Prices are at present not such as to encourage increased interest in this industry.

Grants were sanctioned during 1935 by the Lords Commissioners of the Treasury from the Colonial Development Fund for (a) Completion of the Agricultural Experiment Stations at Morphou, Saitta and Trikoukia—£5,000; (b) Purchase of Stud Animals for the Government Stock Farm—£2,000 and (c) Construction of Produce Inspection Sheds—£3,150. Part of the grants were spent in 1936 and the balance will be spent in 1937.

Apart from these special forms of assistance to particular industries, the Agricultural Department of the Colony continues to give advice, to encourage the cultivation of all suitable crops, to assist agriculturists, to control animal and plant diseases, and, generally, to foster agriculture, the main industry of the Colony, in all its branches, by means of its various organized technical services and by instruction given by itinerant agricultural officers.

The investigations to locate sub-soil water with the aid of the drilling plants were continued during the year. The amount of additional water made available from these activities was 4,695,264 gallons per day. Fifty-two wells were drilled, aggregating 7,072 feet of borehole, and of this number 25 wells were successfully carried to a second source producing the amount of water mentioned above.

Owing to lack of funds re-afforestation by artificial methods had to be reduced to small scale experiments and to repair-planting in existing plantations. Some 7,662 seedlings were sold to private individuals during the year.

Activity in the mining industry continued to expand, and the general outlook is encouraging. A new record was attained in the production of cupriferous pyrites during the year under review; there was also a satisfactory increase in the tonnage of asbestos fibre exported by the new Lessees of the Amiandos quarries.

Two of the recently discovered gold-bearing deposits reached the producing stage and others, which are still in course of development, are expected to produce gold ore early in 1937. There was great activity in prospecting, especially for precious metals, and a larger number of prospecting permits were issued than in the preceding year. There was a substantial increase in the number of persons employed in the mining industry.

Among minor industries, carpet-making and broom-making showed continued activity.

Shoe-making and furniture-making are progressing. Owing to change in policy, the Forest Department gave up letting contracts for the manufacture and sale of wooden articles but carpenters are continuing this method of working in wood, following the original work started by the Forest Department.

The art of embroidery is also well advanced; a great number of girls and women are engaged on needlework and lace-making. Lace is in wide demand abroad.

The making of stockings by machinery mainly for local use has spread considerably and the industry of hat-making, for ladies, is gaining ground.
