The goal of this study is to examine the impact of Self-leadership styles on the dimensions of Entrepreneurial Orientation in organizations in Dubai and the Netherlands: Innovativeness, Risk Taking and Proactiveness. The study also distinguishes the impact of Self-leadership styles and Entrepreneurial Orientation on the dimensions of Creativity and Productivity. A path analysis was performed, applying SEM, using AMOS. The following four hypotheses were tested: H1: The greater the level of 'opportunity thinking' thought pattern strategies, the greater the level of entrepreneurial orientation. H2: The lower the level of 'obstacle- thinking' thought pattern strategies, the greater the level of entrepreneurial orientation. H3: The relationship of the 'opportunity thinking' strategies with creativity will be stronger than that with the 'obstacle-thinking' strategies. H4: The relationship of the 'opportunity thinking' strategies with productivity will be stronger than that with the 'obstacle-thinking' strategies. Overall support was found for hypotheses 3 and 4.
