

Title:	Regional development and non-material public infrastructure
Year:	1997
Author:	Tadashi Yagi and Spyros Vliamos
Abstract:	The aim of this paper is to investigate the conditions under which public investment can be allocated to the infrastructure in material and non-material capital so as to have a positive effect on regional development and interregional inequality. To investigate this issue, the paper focuses on the externalities created by investing in infrastructure for the transfer of information, know-how or technical knowledge.
