Concessions and Permits			General information regarding the industry and the possibilities of development
Concessions, cutting permits, etc.	No.	Area covered.	Although the forests of Cyprus were delimited with an area of 703 square miles in 1892 they now comprise an area of 632.97 square miles. They are situated on the two main ranges of mountains :— (*a*) the southern range, extending across the south-western end of the Island, from Stavrovouni to Cape Akamas ; and (*b*) the northern range, running from Cape Andreas to Cape Kormakiti. Except at the western end, where there are 15 square miles of forest, the forests on the northern range are confined to the hill tops. There are eight main forests, comprising an area of 397.57 sq. miles. Of these 74.50 square miles are either bare, burnt, "cut-over" or comprise rocky, river bed, road, path or other non-forest-bearing areas. There are also mixed timber and juniper forests covering a total area of 227.40 square miles of which 110.00 square miles are rocky, bare, burnt or "cut-over," road, path or river bed areas. The principal forest trees are :— Pinus Halepensis ; Pinus Nigra, Subsp. (Pallasiana) ; Cupressus Sempervirens ; Quercus Alnifolia ; Platanus Orientalis ; Alnus Orientalis ; Cedrus Brevifolia ; Arbutus Andranchne. There are seven Saw Mills situated in the forests and one in Nicosia which partially meet the timber requirements of the Island. Planks, boards, scantlings and rafters are chiefly cut, but also wooden implements, such as shovels and forks, and cart material, such as felloes and spokes, are also made. During the year over 700 kinds of wooden articles were made from different species of wood found in Cyprus. There is scope for the sale of such articles both locally and abroad. Except for the permits mentioned in the annexed table, all forest operations and exploitation of the forest products are conducted by the Forest Department, direct or under contract.

3.—FISHERIES.

Catch of Fish.			Number of boats and persons engaged in fishing.	General information regarding the industry and the possibilities of its development.
Kind of Fish.	Quantity. okes	Landed value.	Number of boats engaged in fishing 437 (including 8 sponge boats.)	In the sea round Cyprus there are plenty of fish but unfortunately the Cypriot is not a fisherman. Few of them will go out except in the very best of weather and in consequence the supply of fish is not equal to the demand. The number of boats has certainly increased of late years but there is still plenty of room for improvement. Three Italian and one Greek sailing trawlers did good work during the year and demonstrated the practicability of increasing the production of this very valuable article of diet by more up-to-date methods than those practised by Cypriots.

The fishing is principally carried on by fishermen from the Greek Islands who arrive in the Island in the spring and fish through the summer.

Each boat must be provided with a licence according to capacity, the following fees being charged :—

	£	s.
(*a*) For each boat fitted with machine diving apparatus, crew not exceeding 30 persons	1	0
(*b*) For each boat fitted with the "Fernez" apparatus only, crew not exceeding 15 persons	1	0

(*d*) For each boat with harpoon (kamaki), crew not exceeding 6 persons	–	10

In addition to the licence fee Machine Boats and Boats with divers pay 25% of their catch to Government and Harpoon Boats 20%.

In 1932 8 Harpoon Boats from the Greek Islands worked from April to September. No Cyprus boats fished during 1932.

The total catch was 1,336 okes.

(*b*) Details regarding these mills cannot be obtained, as very many of them are owned by illiterate persons who keep no books. The grower usually takes his grain to the mill and removes it after grinding. Mills do not generally purchase grain.

There is also a large number of primitive oil mills (with an output of over one million okes) and primitive rope making establishments of which particulars are unobtainable.

(*c*) Primitive kilns, of which no details are available, are also found in certain localities.

7.—SUMMARY OF INDUSTRIAL DEVELOPMENT.

7.—A summarized statement of any developments in the agricultural, forestal, fishing, mining, and other industries of the Colony during the year under review, with a statement as to progress up to date. A special account should be given of Government grants or other action for the development of the natural resources and industries of the Colony.

Cyprus is essentially an agricultural rather than an industrial country. Satisfactory progress has been made during the year and the gradual change from primitive to more modern methods of husbandry continues. A greater interest is taken in the use of modern agricultural implements and machinery, and this interest has been stimulated by the importation by Government of four portable power threshers with tractors and tractor implements. Farmers make more general use of fertilizers and take more personal interest in the control of plant pests and diseases.

The cultivation of potatoes, both summer and winter crops, has maintained a high level. Cyprus potatoes, which are of a fine quality, are exported in large quantities to adjacent countries.

The cultivation of citrus fruits, particularly oranges, has been considerably extended and a valuable export trade in oranges is being built up with the United Kingdom. The citrus experiment station recently established at Famagusta by the Government is making satisfactory progress. Every phase of the industry is being investigated—the suitability of various citrus crops for the District, methods of propagation and cultivation, production, etc., etc. An experimental lime plantation has been established at Lapithos in Kyrenia and the young trees are making good progress. The grape-fruit recently introduced promises to prove another suitable crop for Cyprus. A demand for grape-fruit stock has arisen. There has been a good export trade in oranges and lemons. The expansion of the citrus industry is receiving every encouragement. The Department of Agriculture supplies citrus plants to growers and gives instruction in the proper methods of laying out citrus orchards as well as in the collection, grading and packing of the fruit for export and marketing. A Law to provide for the grading and proper packing and the examination of agricultural produce intended for export is under consideration. Two small factories have been established at Famagusta for the preparation of citrus juices and oils.

The investigations to locate sub-soil water with the aid of the drilling plants were considerably reduced during the year. The amount of additional water made available from these activities was 268,800 gallons per day. Eight wells were drilled, aggregating 2,049 feet of borehole, and of this number 4 wells were successfully carried to a second source producing the amount of water mentioned above.

There has been a good demand for Cyprus mules and donkeys, and several lots have been exported to Egypt, Palestine and Syria. The Manager of the Stock Farm at Athalassa supplied breeding stock to the District stud stables, and the usual number of stud animals has been maintained. In addition, facilities have been given in certain areas for bulls and boars on loan and premium donkeys. The annual sale of surplus livestock took place at Athalassa in November.

Owing to lack of funds re-afforestation was only possible on a small scale and only small extensions to the old plantations were made. During the year some forest lands were ploughed, harrowed and sown by a tractor, and 20,589 seedlings were sold to private individuals.

Mining experienced a severe set-back on account of the continued depression in trade and small demand for minerals and metals. The larger operating mines curtailed their operations to a minimum owing to their inability to market their existing stocks of ore, and development of the mines has been considerably retarded in consequence of the uncertainty of future conditions.

Prospecting activities have been confined to the operations of two mining companies engaged on the systematic drilling and other work commenced some years ago. During the last two months of the year indications of a betterment of conditions were distinctly brighter: enquiries for minerals and the conditions under which mining concessions are granted were more numerous than those of the previous two years.

Important developments have taken place in the following industries:—wine and spirit making, flax, cotton, silk, soap making and carob grinding. With a view to encouraging the local flax industry, the Zodia scutching mill and the scutching mill at Mandria, Paphos, were leased by the Department of Agriculture and worked during the year; at the Mandria mill, hemp as well as flax was prepared for the market. The manufacture of soap has made considerable advances: a new modern soap factory has been established at Limassol and marks a forward step in industrial development, as it obtains most of its raw material locally and the local demand for soap is being largely met from local production.

The local tobacco industry, though affected by the world crisis, has made progress: advances have been made in the quality of tobacco produced, though there is still room for improvement. There are several cigarette factories but these consume imported tobacco chiefly. Some factories manufacture Cyprus cigarettes for local sale and export, and cigarettes of Cyprus tobacco are also manufactured in London where they meet with a good sale. There have been decreased exports of tobacco during the year and the Government has taken legislative measures for the better control and development of the industry.

Activity continues to be shown in the spinning and weaving industry. A great variety of silk, cotton, flax and hemp fabrics of excellent quality is manufactured and finds a ready sale in European, Near East and local markets, notwithstanding the fact that the manufacture is conducted in a primitive method by means of spindles and hand-looms which are of local make. A spinning and weaving school, where better and more advanced implements such as spinning wheels and larger looms are used, has been established at Zodia. There is a cotton mill at Famagusta.

The Silk Filature owned by the Cyprus Silk Filature, Ltd., reopened after the temporary closing down in 1931 owing to the general trade depression and the unremunerative price of silk.

Among minor industries, carpet-making and broom-making showed continued activity.

Bee-keeping on modern methods is developing.

Shoe-making and furniture-making are progressing. A number of wooden articles is manufactured by, or in accordance with designs of, the Forest Department both for local use and for export. The number of articles so manufactured is increasing and the local carpenters and furniture-makers are copying the Forest Department's designs.

The art of embroidery is also well advanced; a great number of girls and women are engaged on needlework and lace-making. Lace is in wide demand abroad.

The making of stockings by machinery mainly for local use has spread considerably and the industry of hat-making, for ladies, is gaining ground.

A grant of £4,000 and a loan of £2,000 were made by the Colonial Development Fund for the introduction of agricultural machinery and implements.
