Title:	INVESTIGATE VIA INTERNET THE PERSONAL VALUES IN LIFE AND HOW DETERMINE THE CONSUMER'S ENVIRONMENTAL BEHAVIOR
Year:	2009
Author:	Stefanos Oikonomou , George Drosatos , Theocharis Papadopoulos , Maria Oikonomou
Abstract:	Everyday the following question is posed: Are businesses more
	successful when they adapt green strategies in producing and
	marketing their products?. To address this issue, we should
	investigate to what determines the buyers' decisions in relation to
	the environmental characteristics of the product. The existence of
	environmental consciousness is related firstly to the research of
	demographic characteristics and secondly to personal values of
	life. The format of this electronic survey was as follows: First, we
	would ask their opinion about the degradation of the environment.
	Upon receiving an answer stating that the environment was indeed
	being degraded then we would ask about their values in life. Those
	who thought otherwise, were asked to state their opinions. We
	took into account opinions regarding the environmental
	degradation as well as to demographic characteristics when we
	evaluated their opinion about values of life. This paper investigates
	how important is the environmental protection in a consumer's
	value in life. This study is unique because it was carried out via e-
	mail using a questionnaire, and the answers were recorded
	automatically in a database which was created for this purpose.
	The sample was random and the participants were notified by e-
	mails. The recipients of the e-mails were urged to forward the
	questionnaire to others. The total number of questionnaires under
	investigation reached 800.
