<b>Title:</b>	<b>SEMANTIC CONCEPTUAL MODEL FOR MANAGING CLINICAL PROTOCOLS</b>
<b>Year:</b>	2015
<b>Author:</b>	Nick Portokallidis, George Drosatos and Eleni Kaldoudi
<b>Abstract:</b>	Clinical protocols play an important role in today's evidence based medicine for developing clinical reasoning skills [1] and they are extensively used both in teaching and practicing medicine. In this research, we will try to organize and propose an ontology for managing (as metadata) clinical protocols in a much more beneficial way than they are currently used.
