ABSTRACT

This paper, tries to evaluate the merger of four separate Cooperative Credit Institutions into

a consolidated one, which is named today Cooperative Bank Pomou-Tillirias. The basic

question in this thesis was the examination whether the mergers and strategic alliances help

Small and Medium Enterprises (SMEs) to expand and become stronger.

The specific case of Pomou-Tillirias Bank was analyzed using data from financial

statements, and survey questionnaires. The financial statements were referring to the

period 1999-2011 and enabled the identification of changes through time and comparisons

of the financial conditions before and after the merger. The questionnaires included 15

questions to be answered, 14 of which were Likert-type selection and 1 open-ended to

provide their own view and where individuals from the Cooperative Bank provided

information. Some of the issues, among others, examined in this study involved the

operational improvement and competitiveness.

The research concluded that in the case of the merger examined, the results were

positive, improving the operations and increasing competitiveness where these have

characterized the merger as successful. The hypotheses of this study were proven through

the results of the analysis since key findings suggested that the merger had positive effect

on turnover and profitability, increased the efficiency and the competitive advantage,

promoted the improvement of the harmonization of organizational procedures with the

demands of the Central Cooperative Bank policy and reduced the operational expenses.

Key words: SMEs, Mergers, Strategic Alliances, Cooperation
